

Political Budget Cycles in the EU

The subject of my thesis is “Political Budget Cycles in the EU”. My dissertation aims to investigate the existence of this type of cycles in the 27 EU members from 1995 to 2022. As well as analysing their existence, I'm studying the main and conditioning factors for the greater or lesser expression of these fiscal manipulations in the service of electoralism.

So far, I haven't found any precise results or conclusions, and a lot of work is still underway, particularly in the development of the econometric model.
